This analysis was performed to better understand employee turnover trends from 2018 to 2022. By examining these trends, we aimed to identify key areas for potential improvement in employee retention strategies, assess the financial impact of turnover, and determine the most vulnerable periods in employees' tenure.

This analysis was conducted to evaluate revenue and profit performance across various product categories over a period of time. The goal was to identify high-performing and low-performing categories, understand trends in sales and profit margins, and guide strategic decision-making for product focus and resource allocation.

The dashboard presents revenue data by category for the years 2015 and 2016, highlighting revenue growth percentages. It also includes pie charts that show the distribution of profit by category and profit margin percentages. Additionally, a bar chart visualizes the number of units sold each year for different categories.

This analysis was performed to assess changes in employee sentiment over time regarding their sense of inclusion, respect, and opportunities within the workplace. The aim was to identify trends that could highlight improvements or declines in employees' perceptions and guide strategies for enhancing workplace culture and collaboration.
